

MATH 316 – Revised Homework Instructions

Homework problems are assigned for every class period. You need to work on the problems on a daily basis. That is, after each class period, work on the problems corresponding to the material covered that day in class. The homework is set up to make it clear which problems to do each day.

Use the given space to fill in your answer. However, if the homework file does not give you enough space to complete the problem, add a page.

Once you have created the PDF file with your solutions, you must upload a **single PDF file to Canvas**. Homework is due at 11:59pm on the given due date. Your two lowest homework scores will be dropped. Solutions will be posted in Canvas.

The homework problems are given in a .PDF file that includes space to write out the solution. To complete the homework, you can choose one of these options:

- Fill in the PDF electronically, for example, using a tablet. Save your result as a single PDF file.
- Print the homework file, complete it by hand, and scan your result into a single PDF file.
 - The PDF file must be **under 30 Mb**. Documents over a limit cannot be viewed in the Canvas grading interface. Review your own submission through the Canvas interface to ensure it is viewable.
 - Using **scanning apps**, such as Microsoft Lens or Adobe Scan, is highly recommended to consolidate, compress, crop, and sharpen your handwritten work into one file.
- Copy the problems onto blank paper, write out your solutions, and scan your result into a PDF file. You **must use** the same layout for your writeup (same number of problems per page etc.) as in the original file, that is, use the same number of problems per page.

Failure to follow these instructions may result in a zero on your assignment!
